SUMMARY

Software engineer with hands-on experience building full-stack SaaS platforms, browser extensions, and backend systems. Focused on production-ready applications with clean architecture and scalable deployment.

EDUCATION

University of Engineering and Technology, Lahore
Bachelor of Science in Computer Science

Sep 2023 – Apr 2027

TECHNICAL SKILLS

Programming Languages: Python, JavaScript, TypeScript, C++
Frontend: React, Next.js
Backend: Django, Node.js, Flask
Databases: PostgreSQL, MongoDB, SQLite
DevOps & Tools: Git, GitHub Workflows, Docker, Nginx, Gunicorn, Postman

EXPERIENCE

Freelance Software Engineer (Founder)

Synplex | Remote | Sep 2024 – Present

- Built and deployed client-facing marketing websites, focusing on performance and SEO optimization
- Delivered production websites end-to-end (development → deployment → maintenance) for clients
- Managed deployments using Vercel, Nginx, and VPS setups, ensuring fast load times and reliable uptime

Web Developer (Retainer)

Attrakt Media | Remote | Aug 2025 – Present

- Maintained and enhanced the company website under an ongoing retainer agreement
- Implemented new features and UI improvements to ensure performance, responsiveness, and compatibility
- Collaborated with stakeholders to deliver continuous updates and feature enhancements

Web Development Intern

Prodigy InfoTech | Remote | Jun 2024 – Jul 2024

- Built web applications using React and Django during internship period
- Collaborated in a remote environment using Git and agile workflows
- Gained hands-on experience in API design, debugging, and deployment basics

PROJECTS

Manify – Full-Stack SaaS Platform (Django, Next.js, PostgreSQL, JWT, Google OAuth)

Live | GitHub

- Built a full-stack SaaS platform for freelancers to manage clients, projects, and budgets
- Designed REST APIs with Django supporting authentication, RBAC, and secure data access
- Deployed on VPS with Nginx + Gunicorn, handling full production setup and environment configuration
- Implemented JWT + Google OAuth, enabling secure and scalable authentication

SceneCue – Content-Aware Browser Extension (Django, TMDB API)

GitHub

- Developed a browser extension that detects active media and flags sensitive scenes using timestamp data
- Integrated with the TMDB API for real-time movie search and identification
- Designed backend system to support crowdsourced timestamp submissions with role-based moderation

MyFitnessPal – Fitness & Community Platform (Django, React, PostgreSQL, JWT)

GitHub

- Built a fitness tracking platform with workout logging and community interaction features
- Enabled users to create posts, track workouts, and engage within a shared ecosystem
- Designed backend architecture with authentication and structured data models
