SUMMARY

Software engineer with hands-on experience building full-stack SaaS platforms, browser extensions, and backend systems. Focused on production-ready applications with clean architecture and scalable deployment.

EDUCATION

University of Engineering and Technology, Lahore

Sep 2023 – Apr 2027

Bachelor of Science in Computer Science

- Member of ACM (Association for Computing Machinery) – Event Management Team

TECHNICAL SKILLS

Programming Languages: Python, JavaScript, TypeScript, C++

Frontend: React, Next.js

Backend: Django, Node.js, Flask

Databases: PostgreSQL, MongoDB, SQLite

DevOps & Tools: Git, GitHub Workflows, Docker, Nginx, Gunicorn, Postman, Firebase, Supabase, Vercel

EXPERIENCE

Freelance Software Engineer (Founder)

Synplex | Remote | Sep 2024 – Present

- Delivered marketing websites for clients across different industries using modern frontend frameworks
- Built and deployed client websites including RoottMedia, Accso Consultants, and AffordableHomeHelp
- Managed project lifecycle from development to deployment and ongoing maintenance

Web Developer (Retainer)

Attrakt Media | Remote | Aug 2025 – Present

- Maintains and enhances company website under a retainer-based engagement
- Implements new features and ensures performance and reliability across devices
- Resolves technical issues and supports ongoing production updates

Web Development Intern

Prodigy InfoTech | Remote | Jun 2024 – Jul 2024

- Built multiple web applications using React and Django during internship period
- Gained experience working with REST APIs, frontend development, and backend integration
- Collaborated in a remote environment using Git and agile workflows

PROJECTS

Manify – Full-Stack SaaS Platform (Django, Next.js, PostgreSQL, JWT, Google OAuth)

[Live](#) | [GitHub](#)

- Built a production-ready SaaS platform for freelancers to manage clients, projects, and budgets
- Implemented authentication, role-based access control, and secure REST APIs
- Deployed on a VPS with full-stack integration and production configuration

SceneCue – Content-Aware Browser Extension (Django, TMDB API)

[GitHub](#)

- Developed a system to detect and notify users of upcoming sensitive movie scenes using timestamped data
- Built a browser extension integrated with TMDB API for movie search and interaction
- Designed backend to support role-based access and crowdsourced timestamp contributions

MyFitnessPal – Fitness & Community Platform (Django, React, PostgreSQL, JWT)

[GitHub](#)

- Built a fitness tracking platform with workout logging and community interaction features
- Enabled users to create posts, track workouts, and engage within a shared ecosystem
- Designed backend architecture with authentication and structured data models
