SUMMARY

Software engineer specializing in Django and React SaaS products, browser extensions, and backend systems, with end-to-end experience from architecture to VPS deployment.

EDUCATION

University of Engineering and Technology, Lahore
Bachelor of Science in Computer Science

Sep 2023 – Apr 2027

TECHNICAL SKILLS

Programming Languages: Python, JavaScript, TypeScript, C++

Frontend: React, Next.js

Backend: Django, Node.js, Flask

Databases: PostgreSQL, MongoDB, SQLite

DevOps & Tools: Git, GitHub Workflows, Docker, Nginx, Gunicorn, Postman

EXPERIENCE

Freelance Software Engineer (Founder)

Synplex | Remote | Sep 2024 – Present

- Built and deployed client-facing marketing websites, focusing on performance and SEO optimization
- Delivered production websites end-to-end (development → deployment → maintenance) for clients
- Managed deployments using Vercel, Nginx, and VPS setups, ensuring fast load times and reliable uptime

Web Developer

Attrakt Media | Remote | Aug 2025 – Present

- Optimized front-end assets and implemented lazy loading and script deferral strategies, reducing initial page load time
- Delivered ongoing UI enhancements and bug fixes, maintaining site stability and cross-browser compatibility

Web Development Intern

Prodigy InfoTech | Remote | Jun 2024 – Jul 2024

- Built and shipped web applications using React and Django within a 6-week remote internship
- Gained hands-on experience in REST API design, debugging, and deployment basics

PROJECTS

Manifest – Full-Stack SaaS Platform (Django, Next.js, PostgreSQL, JWT, Google OAuth)

[Live](#) | [GitHub](#)

- Built a full-stack SaaS platform for freelancers to manage clients, projects, and budgets
- Designed REST APIs with Django supporting authentication, RBAC, and secure data access
- Deployed on VPS with Nginx + Gunicorn, handling full production setup and environment configuration
- Implemented JWT + Google OAuth, enabling secure and scalable authentication

SceneCue – Content-Aware Browser Extension (Django, TMDB API, Docker)

[Live](#) | [GitHub](#)

- Developed a browser extension that detects active media and flags sensitive scenes using timestamp data
- Integrated with the TMDB API for real-time movie search and identification
- Built a moderation pipeline with JWT refresh rotation, scoped throttling, and a contributor trust/reputation system, containerized with Docker

MyFitnessPal – Fitness & Community Platform (Django, React, PostgreSQL, JWT)

[GitHub](#)

- Architected REST API with JWT auth supporting multiple user roles across workout and community features
- Built workout logging and community post system with structured PostgreSQL data models
